ITCS210-Prac-Week15: OOP&AJAX

Instructions

There are 1 activity in this class with an extra point. You have to submit the zip folder of your PHP files on mycourses.

Activity 1: OOP in PHP

Develop a PHP program by modifying the given files using the classes provided (input.php and output.php). Create HTML as the example below:

Parents:	<input type="text" value="John, 35; Jane, 30"/>
Children:	<input type="text" value="Tim, 12; Tom, 10; Tam, 13"/>
<input type="button" value="Process"/>	

Both text areas get input in a format of **NAME,AGE** (no space)

Each pair of inputs is separated by a semicolon (;). Once the “Process” button is clicked, form is processed and the output is shown as the example below.

Rules:

- Users must input only two parents
- Name and Age are mandatory
- Users must input one or more children

This workshop exercise provided:

- PDF file instruction
- Six doll images
- Person class

Parent

Total member is 5

Name: John	Name: Jane
Age: 35	Age: 30
	

Children

Name: Tim	Name: Tom	Name: Tam
Age: 12	Age: 10	Age: 13
		

Extra Activity: AJAX in PHP

Modify the files (input.php and output.php) in activity 1 using AJAX to display results on the web browser.
